Analog output module, 6 channels, 10 bit, −10...+10 V, galvanic isolation to the CPU

Fast output module with electrical isolation from the CPU for universal use with 6 channels each with – 10 ...+ 10 V voltage and 10 bit resolution.

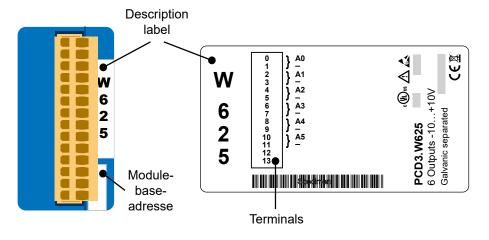

Use of a fast on-board micro controller allows decoupling and relief of the CPU regarding intensive computing tasks, such as scaling and filtering of signal data.

Technical data		
Number of outputs (channels)	6	
Output range	-10+10 V	
Resolution (digital representation)	10 bits (0 1023)	
Resolution	20 mV	
Galvanic separation	500 V, electrical isolation of outputs to CPU, channels themselves not separated	
Short circuit protection	yes (permanent)	
Time constant of output filter	typ. 1 ms	
Load resistance	>3 kΩ	
Cut off frequency	300 Hz	
Accuracy at 25 °C)	±0.4 %	
Temperature error (over temperature range 0 +55 °C)	±0.25 %, 100 ppm/K oder 0.01 %/K	
Internal current consumption (from +5 V bus)	max. 110 mA (typ. 80 mA)	
Internal current consumption (from V+ bus)	0 mA	
EMC protection, according to standards	ENV 50 141, EN 55 022, EN 61000-4-2, EN 61000-4-4, EN 61000-4-5	
Terminals	Pluggable 14-pole spring terminal block type E (4 405 4998 0) for Ø up to 1.5 mm²

# Principle diagram of analog outputs

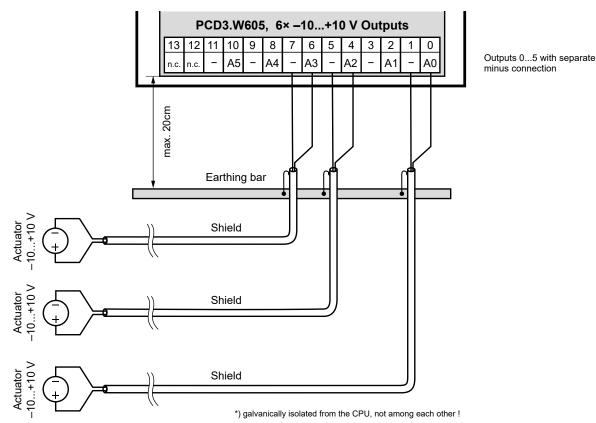

# Output for -10 ...+10 V

# **Connection concept (example)**

The input signals are connected directly to the 14-pin terminal block. In order to couple as little interference as possible to the module via the lines, the connection should be made according to the principle explained below.

### Connection for -10 ...+10 V

# Notes on the output range

Balancing the offset and the amplification is done for the PCD3.W625 digitally by the  $\mu$ C. As there is no potentiometer, the output range has been slightly enlarged to cover maximum values even in the worst case.

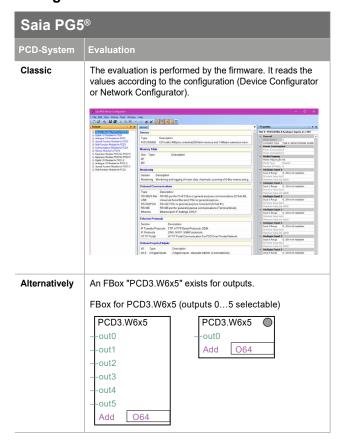

Typical output range (without component tolerances):

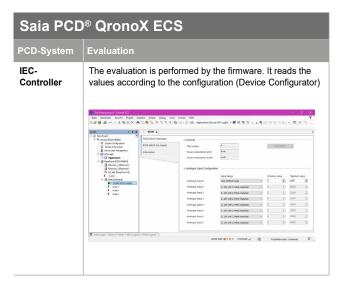

-10.62 V ... +10.36 V (instead -10 ...+ 10 V)

This range is broken down on a 10 bit scale (1024 steps), as before.

The result is the following LSB resolution:  $1 LSB = 20.75 \mu V$ 

# Configuration

#### **ATTENTION**

These devices must only be installed by a professional electrician, otherwise there is the risk of fire or the risk of an electric shock.

#### **WARNING**

Product is not intended to be 0used in safety critical applications, using it in safety critical applications is unsafe.

# **WARNING - SAFETY**

The unit is not suitable for the explosion-proof areas and the areas of use excluded in EN 61010 Part 1.

#### **WARNING - SAFETY**

Check compliance with nominal voltage before commissioning the device (see type label). Check that connection cables are free from damage and that, when wiring up the device, they are not connected to voltage. Do not use a damaged device!

# **NOTE**

In order to avoid moisture in the device due to condensate build-up, acclimatise the device at room temperature for about half an hour before connecting.

#### **CLEANING**

The device can be cleaned in dead state with a dry cloth or cloth soaked in soap solution. Do not use caustic or solvent-containing substances for cleaning.

# **MAINTENANCE**

These devices are maintenance-free.

If damaged during, no repairs should be undertaken by the user.

# **GUARANTEE**

Opening the module invalidates the guarantee.

Observe this instructions (data sheet) and keep them in a safe place.

Pass on the instructions (data sheet) to any future user.

### WEEE Directive 2012/19/EC Waste Electrical and Electronic Equipment directive

The product should not be disposed of with other household waste. Check for the nearest authorized collection centers or authorized recyclers. The correct disposal of end-of-life equipment will help prevent potential negative consequences for the environment and human health.

EAC Mark of Conformity for Machinery Exports to Russia, Kazakhstan or Belarus.
